

FARMER NAME: SRI **SRIKANTH KUMBAR**

PLACE: Mugalkod, Bagalkot(D).

CROP: Sugarcane, Banana, Wheat Turmeric, Marigold & Vegetables.

FARMERS TALK

Since 2 years I have been using **Dr.Soil** (Organic Soil Input) for Sugarcane, banana, few vegetables, Wheat, Turmeric and marigold.

Normally farmers have a mentality that they can grow crops only if they apply chemicals fertilizers and other sprays.

But I am growing different crops in organic farming since 2 years without any crop failure. I have used only **Dr.Soil** and no other inputs and sprays to all my crops.

Water supply for sugarcane crops after the application of **Dr.Soil** has been reduced gradually. Even in summer I supply very less water.

This time I have already got 15-16 ganike in sugar cane for 6 months old plant. Normally with the application of chemical fertilizers you get 10-11 ganike only. My sugarcane quality is really good, the thickness has improved, the leaves are greener and thicker.

This time turmeric color and quality is very good. Yield in banana has been increase to almost 30%.

Both turmeric and banana yield has been improving year after year due to the increase in fertility of my land using **Dr.Soil**.

Yield in wheat was excellent almost increase in 30% yield. Normal yield for marigold is 6-8 tons per acre, but in my farm I have got 12 tons of marigold flowers this time. I have never witnessed anything like this before!

I have never got such quality and quantity in any of my crops when I used to use chemicals to my farm. Since 2 years I have been practicing **Dr.Soil** organic farming which is healthy for farmers and the consumers.

Yours

Srikanth kumar
